SUMMARY

Computer Science undergraduate at VIT Bhopal University with knowledge of AI/ML, Python, C++, and Web Development. Hands-on experience in building machine learning models and developing front-end web projects. Good problem-solving and analytical skills with the ability to develop practical technology-driven solutions.

PROJECTS

Brain Tumor Detection using Deep Learning (VGG16)

[GitHub](#)

- Developed a deep learning-based brain tumor classification model achieving 82% accuracy on 1,324 MRI scans
- Implemented VGG16 with transfer learning for multi-class tumor prediction
- Applied image preprocessing, normalization, and data augmentation for improved robustness
- Achieved precision scores of 79–92% and ROC-AUC 0.88–0.99 across tumor classes
- Built a comprehensive evaluation and inference pipeline using confusion matrix, ROC analysis, and confidence-based prediction

Paraphrase Generation using T5 Transformer

[GitHub](#)

- Developed an NLP-based text generation model using T5 Transformer architecture
- Fine-tuned T5-base on the PAWS dataset (49,401 labeled examples)
- Implemented preprocessing, tokenization, and dataset transformation pipeline
- Optimized training using mixed precision (FP16) and gradient accumulation
- Generated diverse paraphrases using beam search and sampling, and built an inference pipeline

Netflix Responsive Landing Page Clone

[GitHub](#)

- Built a fully responsive streaming platform landing page using HTML5, CSS3, and Bootstrap
- Implemented modular UI sections including hero, pricing modules, feature blocks, FAQ interface, and footer navigation
- Applied responsive design principles using Bootstrap grid, Flexbox, and layout utilities
- Integrated SVG assets and multimedia elements for visual accuracy
- Enhanced UI consistency through structured styling and component-based layout design

EDUCATION

B.Tech in Computer Science (AI & ML) VIT Bhopal University	2023-2027 – CGPA: 8.96/10
Class XII, CBSE Board	2023 — 86%
Class X, CBSE Board	2021 — 94%

RESEARCH PUBLICATION

Priyanshi Nigam et al. “An Intelligent Ticket Checker Application for Train using QR Code.” *International Journal for Multidisciplinary Research (IJFMR)*, March–April 2025. Collaborated on research exploring QR-based automated ticket verification systems.

SKILLS

Domain	AI & ML, Web Development, Data Analysis
Languages	Python, C++, JavaScript, SQL
Programming & Development	Data Structures & Algorithms (C++), HTML, CSS, JavaScript, React.js
Machine Learning	TensorFlow/Keras, CNN & Transfer Learning (VGG16), Image Pre-processing & Augmentation, Feature Extraction & Fine-Tuning, Model Evaluation (Accuracy, Confusion Matrix, ROC-AUC)
Data Analysis	NumPy, Pandas, Matplotlib, Data Cleaning, EDA, Data Visualization
